Utilization of dental general anesthesia in Istanbul University: A retrospective study

Nese Kahraman

Istanbul University, Turkey

Dental treatment under general anesthesia may be needed for some children and adolescents due to medical or behaviour problem. The objective of the study is to identify the reasons of GA (General Anesthesia) usage and type of treatment that has been carried out under GA in Istanbul University, Oral Surgery Department. A retrospective record review study from hospital records of dental patients receiving dental treatment under GA in 2013 were retrieved from the database. Information such as the reason for GA, and the type of treatment provided was recorded in data sheet. A total of 379 cases were treated. Patients were mostly mentally deficient patients. But for the base number and comparison, we are waiting for the statistical results.
