

8th Annual Congress on Polycystic Ovarian Syndrome and Fertility

June 12-13, 2025 | London, UK (Hybrid Event)

KEYNOTE TALKS

Huang Wei Ling

Medical Acupuncture and Pain Management Clinic, Brazil

Emotional aspects involved in the formation of polycystic ovary syndrome and how can we treat this condition in this new global immunodeficiency

Introduction: Polycystic ovary syndrome (PCOS) is a disease characterized by obesity, infertility and menstrual disorders and frequently it is accompanied by metabolic problems and insulin resistance.

Purpose: The purpose of this study is to demonstrate that patients with PCOS has in the back ground, alterations in the emotional part of the mother when the baby was in the womb, where the mother was thinking the possibility to have a male child instead of having a female. In this case, there is an alteration in the formation of the baby, leading to amenorrhea, hirsutism, increase weight, and infertility.

Method: one case report of a 32 years-old female patient with PCOS (obesity, amenorrhea, hirsutism, and infertility). She was the first baby from their parents and was a natural birth. I measured her energy of the five internal massive organs using radiesthesia procedure, which demonstrated that all organs (Liver, Heart, Spleen, Lungs and Kidney) were in the lowest level of energy, rated one out of eight. The treatment of her condition consisted in hypnosis (moving her mind to the womb of her mother, and changing the condition of male child to female child), changing her dietary aspects to balance the energy of these five internal massive organs responsible for the production of *Yin, Yang, Qi* and Blood according to traditional Chinese medicine and it was done acupuncture sessions (auricular and systemic acupuncture). It was replenished the energy of these five internal massive organs using highly diluted medications according to the theory of

Constitutional Homeopathy of the Five Elements Based on Traditional Chinese Medicine and crystal-based medications.

Results: she began to have normal menstrual cycle, reduced the weight, and still in treatment nowadays.

Conclusion: The conclusion of this study is to demonstrate that patients with PCOS have emotional alterations since when they were in the mothers' womb caused by the mother's unconscious wanting to have a male son. The treatment of this condition using hypnosis and other measurements associated to rebalance (Chinese dietary counseling, auricular and systemic acupuncture) and replenish the energy of the internal five massive organs of the five elements theory of Traditional Chinese Medicine can increase the chance to reduce these alterations presented in patients with PCOS syndrome.

Biography

Huang Wei Ling, born in Taiwan, raised and graduated in medicine in Brazil, specialist in infectious and parasitic diseases, a General Practitioner and Parenteral and Enteral Medical Nutrition Therapist.
