## **Reduce accidents in childhood**

**Shaghayegh Rahmani**

Islamic Azad University, Iran

**T**raumatic injuries are an important cause of death and disability in childhood. These types of injuries imposing a great deal of stress for children and children and accompanied with financial and emotional cost for society and families. Identifying the most common type of traumatic injuries and their underlying related factors helps to promote preventive strategies based on children age, his structural aspects and developmental status. For design an effective method we should consider on World Health Organization (WHO) model which focuses on prevention of injury, reducing the severity of injury and decreasing long term consequences.
