Sessions/tracks

Track: Post-traumatic stress disorder: PTSD is a psychiatric illness

that can occur in a person who experienced or witnessed a traumatic event such as a natural disaster, a serious accident, a terrorist act, war/ combat, sexual abuse or who has been threatened with death and also a serious injury.

This can leads to long-term effects which include flashbacks, insomnia, and anxiety. Instance some focus points that triggers post-traumatic stress disorder (PTSD) are wars, crimes, fires, accidents, death of a loved one, or abuse of some form. Memories reoccur even though the risk was over.

Track: Trauma anaesthesia: Trauma patients present facing a unique challenge to anesthesiologists, since that patient requires resource-emergency unit, which usually gets intricate by pre-existing medical conditions. It initiates before a patient entry into operating room, preparation of anesthetic medications and usual machine checks. Governing a trauma patient needs an organizing plan with surgical teams, anesthesia teams, operating room nurses and technicians. The targeted audiences are Anesthesiologists, pain medicine physicians, critical care physicians and trainees.

Track: Critical Care: The Society of Critical Care Medicine (SCCM) represents nearly 16,000 well-trained professionals, in addition to that 100 countries who arranged special-care in peculiar units and worked towards the easy end-result as it gets possible for all critically ill and injured victims. The annual critical care (CC) drugs costs hiked from \$56.6 to \$81.7 billion, representing 13.4% of hospital costs, 4.1% of national health expenditures, and 0.66% of GDP. Cost savings up to \$1 billion per quality-adjusted life year are frequently achieved with critical care management of severe septicemia, acute respiratory failure, and general CC interventions.

Track: Nursing: Nurses are the experts who provide medical-care to patients and provide them with good health. The medical-care provided by the skilled nurses helps them to strengthen the life-style of patients with their families and with group communities. Nurses work with doctors so that the patients contribute better of them. Nursing Care, it is permitted to the self-governing and collective care of individuals from all types such as ages, families, groups and communities. It also includes events like prevention of illness, health and caring of ill-persons, disabled people and those who are in very critical conditions.

Track: Emergency Nursing: Emergency Nurses (ER) treat patients who are suffering from trauma, injury or severe medical cases and those who require urgent treatment. These experts work in critical situations, they must rapidly pick-out the best way to stabilize patients and minimize their pain. ER (Emergency) nurses are daily monitor and treat patients simultaneously, and they work with a group of experts. For instance, radiologists & orthopedic experts, supply the highest-quality care. Stomach ache, respiratory infections, superficial injury (an injury that does not affect muscles or organs), Chest pain. Behind any 'minor' injury, there may be a 'major' one stimulating.
